Illertissen (Germany), November 15, 2023

Perfectly sorted for the working day

TANOS expands the Systainer³ range with new sorting and storage solutions for workshops, vehicles and construction sites

With the Systainer³ Combi and Sortainer models, TANOS presents two smart new developments for the sorting and storage sector. The Systainer³ Combi - a perfect combination of systainer® and integrated drawer - and the sophisticated Systainer³ Sortainer drawer system serve as flexible storage solutions for construction sites and workshops, just like the popular predecessor models in the T-LOC range. Together with the design transfer to the third systainer® generation, manufacturer TANOS is now adding numerous clever extras to its new products: In addition to the intuitive systainer® interfaces, pull-out aids and all around optimised stability, the new vehicle mounting option stands out in particular. The new Systainer³ Combi and Sortainer models will be available from January 2024.

Being well organised makes working life easier. The quality manufacturer TANOS also knows that this is particularly true for everyday life on construction sites, where tradespeople need to have dowels, drill bits, foam guns and multimeters at hand and within easy reach at all times. Its transport and mobility solutions from the Systainer³ range offer numerous features that make working in the workshop or on assembly sites more structured and easier. While all Systainer³ can be linked together and personalised plug-in cards can be added, the various system cases boast a number of additional highlights. The new Systainer³ Combi, for example, is equipped with a practical anti-theft device in the form of theft tags, which can be used to lock or even seal the model in no time at all. Both new additions, the Systainer³ Sortainer and the Systainer³ Combi, are also designed for secure storage in the vehicle. This is guaranteed as standard thanks to integration into bott's vario3 equipment.

TANOS Product Manager Norbert Jehle emphasises: "A modern packaging and transport system like the systainer® must be as mobile as possible. With our new Systainer³ models Combi and Sortainer, we are now adding two flexible solutions to our vehicle-compatible system case portfolio that are fully tailored to sorting and storage requirements."

For large and small items: the Systainer³ Combi

The new Systainer³ Combi is the perfect combination of systainer® and integrated drawer. Available in sizes M 287 and M 337, the Systainer³ base offers plenty of space inside for a wide range of tools, from sensitive measuring and testing equipment to angle grinders and jigsaws. The combi case is completed by an integrated drawer equipped with two dividers, which proves to be a practical helper with well-organised storage space for small accessories and associated consumables of all kinds. Special insert boxes, which are also used in the

Systainer³ Organizer, round off the professional sorting of small parts: Dimples on the base and lid hold the boxes in place and ensure that even the smallest parts stay in place.

Mixing excluded: the Systainer³ Sortainer

Linkable, stackable and available in two versions: Equipped with three drawers and numerous dividers, the Systainer³ Sortainer is the ideal case system for clearly organised storage of a wide variety of small parts. As a version with one small and one large drawer, the system is also ideal for storing and transporting larger items such as batteries and chargers. The layout can be customised as required: all drawers can be divided individually, ensuring optimum flexibility in use - whether for the professional laying of water pipes, the electrical wiring of heating systems or intricate work in the woodworking sector.

As usual, the new systems from TANOS for sorting and storage requirements are compatible with all members of the systainer® product family and can be individually configured. This applies to the selection of possible inserts and inlays as well as to the colour design and brand personalisation of the individual case components.

The new Systainer³ Combi and Systainer³ Sortainer from TANOS will be available from January 2024.
