Illertissen (Germany), February 6, 2024

Small cases, big solutions

TANOS unveils the new systainer® models Systainer³ S and Systainer³ Rack.

With the new Systainer³ models S 76 and S 147, TANOS is transferring its existing MINI-systainer® range to the latest generation. The system cases in compact format are specialized in the storage of small parts and prove to be flexible space savers in mobile use on the construction site or in the workshop. TANOS is also providing the new family members with an additional storage solution: the new "Systainer³ Rack" offers space for up to six Systainer³ S 76 in a portable shelving system. This means that even large quantities of small parts can be stowed away neatly and transported safely thanks to the integrated van racking system. The Systainer³ S 76, S 147 and the Systainer³ Rack will be available from April 2024.

The requirements of tradespeople are as varied as the work they do every day on the construction site or in the workshop. TANOS is well aware of this and has always designed its system cases as flexible helpers for every conceivable need. This is also the case with the latest generation of small-format systainer®: TANOS has not only given the Systainer³ models S 76 and S 147 numerous upgrades compared to the previous versions. In addition, the compact newcomers in size S 76 have been given a practical shelving solution in the form of the innovative Systainer³ Rack, which allows them to be safely stowed and transported in vehicles.

Mobile space savers: the Systainer³ S 76 and S 147

The new S 76 and S 147 small parts cases from TANOS measure just 76 x 265 x 171 mm and 147 x 265 x 171 mm respectively. This handy size makes them ideal companions for use outside the home - and offers more than enough space for a well-assorted selection of accessories of all kinds. The interior of the cases can be flexibly adapted to your own needs. A variable compartment divider set, for example, always provides the necessary overview, while the special lid contour of the Systainer³ S 76 and S 147 ensures that all individual parts remain in their intended place even during bumpy transportation. In addition, the clever storage solutions can be fitted with various inserts so that tools and larger individual parts can also be stored in a non-slip manner as required. Unobtrusively integrated theft tags reliably protect the inside of the case from unauthorized access.

As usual, the new TANOS systems for the small parts sector can also be individually configured. This applies to the colour design of the individual case components as well as to brand personalization.

A big one for the little ones: The Systainer³ Rack

Specially developed for the Systainer³ S 76, the new Systainer³ Rack shelving component extends its range of functions to include numerous application scenarios. A total of six Systainer³ S 76 can be integrated into the Systainer³ Rack. A mechanical push mechanism ensures intuitive removal, while a dedicated locking system guarantees safe transportation of the integrated Systainer³ S by hand, on a cart or - thanks to full integration capability in bott's vario3 van racking systems - in a van. But that's not all: "In conjunction with the Systainer³ Rack," emphasizes TANOS Product Manager Norbert Jehle, "our Systainer³ S can be linked to the entire systainer® range for the first time. This means that all Systainer³ can now be combined with each other in every conceivable combination within the systainer® family."

The new Systainer³ S 76, S 147 and the Systainer³ Rack from TANOS will be available from April 2024.
